Gentlemen, as a new owner of a NGV Honda Civic I wanted to write you and protest your recent decision to raise natural gas prices. Clearly, it is difficult for all of us who have purchased these vehicles to understand why you would dis-incent the entire market from going to NGV. Utah has been the leader for the nation in taking us to a new generation in the energy movement to get off of fossil fuels. why in name would you negatively impact this movement when even Gov. Huntsman has also gone NGV. Your group undoubtedly will be responsible for making one of the worst decisions in the history of this nation not just the state. You should be working with Questar to promote NGV incentives to build more stations and have more people turn to this energy source. This is not about policy, not about law, it's about saving our planet and giving a future to the next generation. I beg you to reconsider your decision and turn your efforts to promoting this movement. I am sure TI Boone Pickens is shaking his head as to what is going on in Utah!!!!

Regards

Ron Huggins
